GPS mapping GPS (Global Positioning System) isn't just for your car. It can serve you in thousands of ways besides navigation. You can track trail conditions with a device like the Garmin Forerunner GPS unit or even use it to find your way home. In addition to outdoor uses, you can also get pleasure from GPS devices that can help with indoor activities as well. You can use the Garmin Forerunner 210 to see how far you've run. GPS devices can also track your workout, including the duration and intensity, and you can analyze how long and how far you run each day or week (see Figure 6-15). The Garmin Forerunner GPS is a multifunctional sports watch; it is your first GPS — a high-definition, precise map of your environment, plus valuable information about your speed, distance, calories burned and more. Photo by Andy Skirvin **Figure 6-15:** Garmin's Forerunner 210 GPS watch tracks your speed, distance and other statistics. Many devices fall into the sports watch category. They can track your speed, distance, calories and other information, but sports watches aren't as precise as GPS devices such as a Garmin Forerunner.

[Negative and positive aspects of parents' life balance]. In the context of the rising interest in the subjective aspects of life balance, this study set out to examine the relationship between parents' life balance and their well-being. In this study we explored parents' perceptions of balance and the relative importance of positive and negative aspects of their life balance. Data from a large sample of parents living in Switzerland (n = 180) were collected in a self-administrated questionnaire. Despite several socioeconomic differences between parents, the study confirmed that the subjective aspects of life balance are very closely linked with their subjective well-being. The importance assigned to each of the positive and negative aspects of life balance was found to be similar in both parents' and children's subjective evaluations. In addition, our results showed that parents who perceived themselves as having a higher life balance were generally characterized by a higher subjective well-being. This study demonstrates that, in spite of the considerable diversity of life situations, there are common elements between parents and children in their life balance perceptions. Future studies should seek to clarify the nature of these elements. FILED NOT FOR PUBLICATION MAR 04 2011 MOLLY C. DWYER, CLERK UNITED STATES COURT OF APPEALS U.S. C O U R T OF APPE ALS
